

Project: Work Boat Transport from Houma, LA to Alaska

Trans-Logistics Management Services, Inc. arranged rigging and provided transportation of this Crowley emergency response work boat from Houma, LA to Port of Seattle, WA where it was then transported by barge to Alaska. Land transport was completed using a 13 axle trailer with a steer able rear stinger to maneuver the 180' long trailer and truck unit along its route. Load required extensive route surveys, state road permitting, and the use of escorts and in certain locations police escort.

Once load arrived at Port of Seattle it was safely loaded on to ocean barge and shipped to Alaska and placed into service as part of the Crowley Emergency Response Vessel fleet.
